KEY TO THE PRODUCT LISTINGS

How to Find a Product

Products are listed alphabetically by their prevailing names.

Trademarked Name. An example is "Valium," the original brand of diazepam. You will find information on this product under "V" rather than "D." Under the generic name of multi-source products like diazepam, you'll see a cross-reference to the brand. If there is only one source of a product, you'll find a listing for the brand name only.

Generic Name. A generic name like "diazepam" is followed by listings for each company offering the product. If the company markets it under the generic name, product information is included. If the company uses a trade name, there's a cross reference to it. Looking down the list of firms marketing diazepam, for instance, you'll find a cross-reference to Valium under Roche/PR.

Manufacturer's Name. If a product forms part of a line known primarily by its manufacturer's name, that's where you'll find it. For example, syringes and needles made by Becton, Dickinson & Co. appear under "B."

How to Read the Listings

The first line of each listing generally gives a product name and the name of a company. If it's a brand-name listing, this information is followed by the generic name. If it's a generic listing, the company name shown is the first in an alphabetical list of several firms marketing the product. Company names are abbreviated. For the complete name, address, and phone number, consult the Manufacturer Information section.

Following the company heading, you'll find entries for each form, strength, and quantity of the product available from the designated firm. The entry includes the "Orange Book" code if applicable, the appropriate NDC or product number, the average wholesale price, and the direct and suggested retail prices, as available.

Interpreting the Price Information

Prices are shown in two columns. The first contains the average wholesale price (AWP). The second contains the direct price (DP) and suggested retail price (SRP), when

available. The DP is shown in plain type. The SRP is printed in bold.

Unit prices are identified as "ea," "per pkg," "per unit," "per case," or "per carton." The "per gross" price applies to quantities of 144 units.

All prices are current as of the date RED BOOK went to press. However, actual prices paid by retailers may vary; and all prices are subject to change without notice.

The prices shown here are based on data obtained from manufacturers, distributors, and other suppliers. While great care has been exercised in compiling this information, the publisher of RED BOOK does not warrant its accuracy. The information may be supplemented by prices published in catalogs or other printed materials disseminated by manufacturers or distributors.

Interpreting the Orange Book Codes

These codes are designed to tell you whether a product is therapeutically equivalent to other "pharmaceutically equivalent" products. The codes are assigned by the Food & Drug Administration, and published in a guide entitled *Approved Drug Products with Therapeutic Equivalence Evaluations*, the so-called "Orange Book." Only multi-source products are rated.

The first letter of the code gives the FDA's basic rating. An "A" means the product has been deemed therapeutically equivalent to other products containing the same active ingredient in an identical amount and dosage form. A "B" rating means that the product's bioequivalence has not been confirmed.
